EXPERIENCE

GOOGLE SUMMER OF CODE 2017 | SyMPy

May 2017 – August 2017 | Mentors: Isuru Fernando and Sumith Kulal

- Improved overall infrastructure of *SymEngine*, a fast standalone C++ Computer Algebra System (CAS), and refactored its Python wrapper *SymEngine.py*.
- Introduced SymEngine as an optional core for *SymPy*, a popular symbolic manipulation engine in Python, and *PyDy*, a multi-body dynamics tool-kit.
- Implemented the support for Relational operators and NaN data type in SymEngine, Singleton Pattern in SymEngine.py, along with improvements to the Continuous Integration (CI), and increasing the code coverage of both the libraries.

PROJECTS

GESTURES ALIVE | GESTURE RECOGNITION PACKAGE

Autumn 2017

- Used Python libraries OpenCV and NumPy to build a gesture recognition app.
- Used web-cam to detect hand, and track its lateral movements.
- Gestures are processed to and matched with pre-defined custom gestures to give output.

ORGAN EXCHANGE | PATIENT-DONOR EXCHANGE RESOLVER

Autumn 2017

- Developed a full stack web application using Django to allocate donor organs to patients keeping donor preference and blood group viability factors.
- Implemented a modified version of Gale-Shapley algorithm to reduce the exchange to a stable matching problem.

LET'S FOOTBALL | DESIGN-PATTERN BASED GAME ENGINE

Summer 2017

- Programmed a Football Game Engine in C++ to simulate object interactions of a football game.
- Identified and solved design problems associated with Football, Players and Team Strategy using Observer, Decorator and Strategy patterns respectively.
- Implemented RCP support for resource management and garbage collection.

ENIGMA STEGANOGRAPHER | STEGANOGRAPHY TOOL

Spring 2017

- Implemented the well known 1930 Enigma I Cipher (used by the Axis Powers in World War II) in C++.
- Enhanced capabilities by adding additional military plug-board support and increasing the number of encrypting mechanical rotors.
- Provides a total number of 11.2 sextillion different possible combinations.
